

Spray ball A2-2

Operating range:

Cleaning of machine parts, tanks and technological installation in the food, chemical, pharmaceutical, cosmetics and biotechnology industry.

Principle of operation:

Water flowing at the appropriate pressure through the spray ball holes is cleaning tank by hitting in the dirty surface with high speed.

The spray balls are produced in varying sizes with holes of different configuration and diameter, depending on the size and shape of the cleaned container.

In upper part of the spray ball there is a special flattening with extra holes located on it. This ensures proper cleaning of top tank surface and let avoid of unclean areas.

-  recommended working pressure: 0,5-1,5bar
-  the effective range of cleaning: $\varnothing 2$ -2,5m
-  spray angle: 180° up
-  material: DIN 1.4306 / 1.4404 / 1.4539
-  connection type: Clip on
-  surface: grinded
